La serie Alterego, in gres porcellanato ultrasottile rinforzato da un supporto in fibra di vetro, per uno spessore totale di soli 3,5mm, è l'ideale sia come rivestimento che come pavimento. I sette colori sono disponibili in due formati, esagono e trapezio, per consentire molteplici soluzioni geometriche. La monocromia, mai come in questo contesto, conferisce profondità e volume.

The Alterego series, in ultra-thin porcelain reinforced with a fibreglass backing to give an overall thickness of just 3.5 mm, is ideal both as a wall covering or as a floor covering. The seven colours are available in two shapes: hexagon and trapezium, which can be combined to create multiple geometrical solutions. This context provides the maximum expression of the ability of a single colour surface to impart depth and volume to a tile body whose apparent fragility is deceptive in the extreme.
